The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents cDNA encoding a mutant soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase having a decreased capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1533

The invention relates to an isolated nucleic acid fragment encoding a CC soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-CC phosphate synthase having decreasing capacity for the synthesis for myo-CC inositol-1-phosphate. Also included are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its CC complement, subfragment or the complement of the subfragment, operably CC linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant CC comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, as seed content of raffinose plus CC greater than 200 micromol/g, pand a seed content of a seed stachyose of less than 14.5 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR33), seeds CC (comprising crossing LR33 or the plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of CC crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ક
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁

The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful soybean products, since the presence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence encodes a wild-type myo-

MetPheIleGluAsnPheLysValGluCysProAsnValLysTyrThrGluThrGluIle

```
The invention relates to an isolated nucleic acid fragment encoding a cc soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1- cinositol-1-phosphate. Also included are a chimeric gene (comprising the complement, subfragment or the complement of the subfragment or the complement of the subfragment, complement, subfragment or the complement of the subfragment, operably cc linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, as eed content of raffinose plus stachyose of less than 17 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR33), seeds (comprising trossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of cromstising that has a heritable phenotype (comprising step that has a heritable phenotype as mentioned above), seeds of soybean plant and selecting a progeny plant of the cross of crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant (homozygous for one or more gene encoding a complement product derived from seeds of a soybean plant with the above plant with the spency of the synthesis of myo-inositol 1-phosphate synthase having decreased confers a compression of myo-inositol 1-phosphate, where the gene confers a complement of soybean plant (homozygous for one or more gene encoding a confermation product derived from seeds of a soybean plant with heritable phenotype as mentioned above), and making or producing a soybean product derived from seeds of a soybean plant with for heritable phenotype as mentioned above. The nucleic acid is useful for alternate of soybean seeds thus leading to valuable and useful conjugate to large the southers content of raffinose oligosacharides in soy plants (and other legumes) can lead to flatulen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose phytic acid and inorganic phosphate content of soybean seeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (HITZ/)

CC seed of the soybean plant, a soy protein product derived from the
CC comprising the chimeric gene, a method of making the soybean plant a
CC seed of the soybean plant, a soy protein product derived from the
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC decreased raffinose, stachyose and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents cDNA encoding a wild type
CC soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1760 BP; 494 A; 371 C; 411 G; 484 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                       This is the nucleotide sequence of cDNA encoding the wild-type soybean CC myo-inosicol 1-phosphate synthase (MI 1-PS) present in clone p5bmi-lps CC (ATCC 97970). The clone was isolated from a cDNA library of soybean line CC LR13 by hybridisation to a probe made from MI 1-PS cDNA of Arabidopsis CC thaliana. MI 1-PS is involved in glucose metabolism to phytic acid, CC raffinose and stachyose. A mutant MI 1-PS nucleic acid (see AN62443) has been identified in soybean line LR33, a mutagenised line of low raffinose CC saccharide phenotype. Sequencing revealed a single base change mutation CC (G to T at base 1241) in the LR33 sequence. The mutation results in a CC seed phenotype of very low raffinose saccharide sugars, very high sucrose CC and low phytic acid. The nucleic acid is used to alter the raffinose CC saccharide, sucrose, phytic acid and inorganic phosphate content of CC saccharide, sucrose, phytic acid and inorganic phosphate content of CC acid content of less than 17 ug/g, a seed content of raffinose and CC stachyose combined of less than 14.5 ug/g, and a seed sucrose content CC greater than 200 ug/g. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Soybean plants containing altered myo-inositol-1-phosphate gene - useful for generating plants with altered levels of e.g. raffinose, stachyose, phytic acid, etc.
                                                                                                                                                                                                                                                                                                                 Sequence 1782 BP; 516 A; 371 C;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
This is the nucleotide sequence of cDNA encoding a mutant soybean myo-
CC inositol 1-phosphate synthase (MI 1-PS) present in clone LR33-10. This
CC clone was isolated from a cDNA library of soybean line LR33 by PCR
CC amplification (see AAV62441-42). Line LR33 was obtained by chemical
CC mutagenesis of wild-type soybean genome and as a reduced raffinose
CC sacid, raffinose and stackyose. Sequencing revealed a single base change
CC wild-type sequence (see AAV62440). The mutation results in a seed
CC wild-type sequence (see AAV62440). The mutation results in a seed
CC phenotype of very low raffinose saccharide sugars, very high sucrose and
CC low phytic acid. The mutated MI 1-PS nucleic acid is used to alter the
CC content of soybean seeds, leading to useful soybean products, e.g. a seed
CC ontent of soybean seeds, leading to useful soybean products, e.g. a seed
CC phytic acid content of less than 17 ug/g, and a seed sucrose content
CC greater than 200 ug/g. (Updated on 17-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                            Soybean plants containing altered myo-inositol-1-phosphate gene - usefu
for generating plants with altered levels of e.g. raffinose, stachyose
phytic acid, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Glycine max; line
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Soybean; myo-inositol 1-phosphate synthase; phytic acid; ds.

results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a soy protein product derived from the processing of soybean seeds, a method of making or producing a soy protein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate synthase havir decreased capacity for the synthesis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents cDNA encoding a mutant soybea myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (HITZ/) HITZ W I

                                                                                                                                                                                                                                                                               The invention relates to a nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase decreased capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                                                                                                                                                                                                    Claim 10; SEQ ID NO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2004-533135/51.

Novel isolated nucleic acid fragment encoding soybean myo-inositol phosphate synthase, useful for altering raffinose saccharide, sucre phytic acid and inorganic phosphate content of soybean seeds.

Claim 8; SEQ ID NO 5; 34pp; English.

The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthasis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment or operably linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, as seed content of raffinose plus stachyose of less than 14.5 micromol/g, and a seed sucrose content of greater than 200 micromol/g, provided that the plant is not LR33), seeds from the plant, making a soybean plant with the heritable phenotype

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC (comprising crossing LR33 or the plant comprising the chimeric gene with CC an elite soybean plant and selecting a progeny plant of the cross of CC crossing step that has a heritable phenotype as mentioned above), seeds CC of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a CC mutant myo-inositol 1-phosphate synthate having decreased capacity for CC the synthesis of myo-inositol 1-phosphate, where the gene confers a CC soybean protein product derived from seeds of a soybean plant with CC heritable phenotype as mentioned above), and making or producing a CC soybean protein product derived from seeds of a soybean plant with CC heritable phenotype as mentioned above. The nucleic acid is useful for CC altering raffinose saccharide, sucrose, phytic acid and inorganic CC phosphate content of soybean seeds thus leading to valuable and useful CC soybean products, since the presence of high concentration of raffinose CC oligosaccharides in soy plants (and other legumes) can lead to flatulence CC when consumed by humans. The present sequence encodes a mutant myocoxxxx in solid 1-phosphate synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 1533

                                                                                             US-10-718-952-2
                                                                                                                                                                                                                         Alignment
                                                                                                                                                                                                                                                                              The invention relates to a nucleic acid fragment encoding a soybean myo-
CC inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate
CC synthase having a decreased capacity for the synthesis of myo-inositol 1-
CC phosphate. The invention also relates to a chimeric gene operably linked
CC results in a decrease in expression of an endogenous or native gene
CC results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant
CC comprising the chimeric gene, a method of making the soybean plant, a
CC seed of the soybean plant, a soy protein product derived from the
CC processing of soybean seeds, a method of making the soybean plant, a
CC protein product and a method of using a soybean plant homozygous for at
CC least one gene encoding a mutant myo-inositol 1-phosphate synthase having
CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The
CC concleic acid fragment and methods are useful for producing plants with
CC decreased raffinose, stachyses and phytic acid content and increased
CC sucrose and inorganic phosphate content, leading to valuable and useful
CC soybean products. This sequence represents cDNA encoding a wild type
CC soybean myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          07-APR-1998;

CC inneitol 1-phosphate synthase or a mutant myo-inositol 1-phosphate (CC synthase having a decreased capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked (CC to suitable regulatory sequences, where expression of the chimeric gene (CC results in a decrease in expression of an endogenous or native gene (CC encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant, (a) comprising the chimeric gene, a method of making the soybean plant, (a) comprising the soybean plant, a soy protein product from the (CC processing of soybean seeds, a method of making or producing a soy (CC protein product and a method of using a soybean plant homozygous for at (least one gene encoding a mutant myo-inositol 1-phosphate synthase having (CC decreased capacity for the synthesis of myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with (CC decreased raffinose, stachyose and phytic acid content and increased (CC sucrose and inorganic phosphate content, leading to valuable and useful coybean products. This sequence represents cDNA encoding a mutant soybean content and increased content, leading to valuable and useful cor myo-inositol 1-phosphate synthase polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a nucleic acid fragment encoding a soybean myo-
inositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate

                                                                                                                                                                                                                                                                                           b
```

Novel isolated nucleic acid fragment encoding soybean myo-inositol phosphate synthase, useful for altering raffinose saccharide, sucre phytic acid and inorganic phosphate content of soybean seeds. sucrose,

Claim 2; SEQ ID NO 15; 34pp; English.

CC omplement, subfragment or the complement of the subfragment operably
CC linked to suitable regulatory sequences, where expression of the chimeric
CC gene results in a decrease in expression of an endogenous or native gene
CC encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant
CC comprising the chimeric gene (with a heritable phenotype of a seed phytic
CC acid content of less than 14.5 micromol/g, as seed content of raffinose plus
CC greater than 200 micromol/g, provided that the plant is not LR33), seeds
CC greater than 200 micromol/g, provided that the heritable phenotype
CC (comprising crossing LR33 or the plant with the heritable phenotype
CC (crossing step that has a heritable phenotype as mentioned above), seeds
CC from seeds of a soybean plant and selecting a progeny plant of the cross of
CC crossing step that has a heritable phenotype as mentioned above), seeds
CC from seeds of a soybean plant (homozygous for one or more gene encoding a
CC mutant myo-inositol 1-phosphate synthase having decreased capacity for
CC the synthesis of myo-inositol 1-phosphate, where the gene confers a
CC mitable phenotype as mentioned above), and making or producing a
CC heritable phenotype as mentioned above. The nucleic acid and inorganic
CC phosphate content of soybean plant with the final acid is useful for
CC phosphate content of soybean seeds thus leading to valuable and useful
CC soybean products, since the presence of high concentration of raffinose
Oligosaccharides in soy plants (and other legumes) can lead to flatulence
when consumed by humans. The present sequence encodes a wild-type myoinositol 1-phosphate synthase. The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthase for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the inositol 1-phosphate synthase.

                                                                                                                                                                                                                                                   synthase"
```

CC encoding a soybean myo-inositol 1-phosphate synthase), a soybean plant CC comprising the chimeric gene (with a heritable phenotype of a seed phytic CC acid content of less than 14.5 micromol/g, a seed content of raffinose plus CC stachyose of less than 14.5 micromol/g, and a seed content of raffinose plus CC from the plant, making a soybean plant with the plant is not LR33), seeds C from the plant, making a soybean plant with the heritable phenotype (comprising crossing lR33 or the plant comprising the chimeric gene with CC an elite soybean plant and selecting a progeny plant of the cross of CC crossing step that has a heritable phenotype as mentioned above), seeds CC footybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a CC mutant myo-inositol 1-phosphate synthase a soybean plant with the dove method, a soy protein product derived content so for the synthesis of myo-inositol 1-phosphate, where the gene confers a CC heritable phenotype as mentioned above), and making or producing a CC heritable phenotype as mentioned above, and making or producing a CC soybean products, since the presence of high concentration of raffinose coligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The present sequence encodes a wild-type myo-inositol 1-phosphate curriage The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase and synthase are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the nucleic acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment, operably linked to suitable regulatory sequences, where expression of the chimeric gene results in a decrease in expression of an endogenous or native gene Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds. Example 8; SEQ ID NO 13; 34pp; English. inositol 1-phosphate synthase.

The invention relates to a nucleic acid fragment encoding a soybean myonositol 1-phosphate synthase or a mutant myo-inositol 1-phosphate synthase having a decreased capacity for the synthesis of myo-inositol 1-phosphate. The invention also relates to a chimeric gene operably linked to suitable regulatory sequences, where expression of the chimeric gene encoding a soybean myo-inositol 1-phosphate synthase, a soybean plant comprising the chimeric gene, a method of making the soybean plant, a seed of the soybean plant, a seed of the soybean plant, a method of making the soybean plant, a processing of soybean plant, a method of making or producing a soy protein product and a method of using a soybean plant homozygous for at least one gene encoding a mutant myo-inositol 1-phosphate. The nucleic acid fragment and methods are useful for producing plants with
                                                                                                                                                                                                                                                                                                                                             New nucleic acid fragment encoding myo-inositol 1-phosphate synthase, useful for producing plants with decreased raffinose, stachyose, and phytic acid and increased sucrose, leading to valuable and useful soybean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Soybean; myo-inositol 1-phosphate synthase; gene; ss; myo-inositol 1-phosphate; raffinose; stachyose; phytic acid; sucrose; inorganic phosphate; mutant.
                                                                                                                                                                                                                                                                                           Claim 10; SEQ ID NO 11; 48pp; English

decreased raffinose, stachyose and phytic acid content and increased sucrose and inorganic phosphate content, leading to valuable and useful soybean products. This sequence represents cDNA encoding a mutant soybe myo-inositol 1-phosphate synthase polypeptide of the invention.

CC nucleis acid encoding soybean myo-inositol 1-phosphate synthase, its complement, subfragment or the complement of the subfragment operably CC linked to suitable regulatory sequences, where expression of the chimeric Gene results in a decrease in expression of an endogenous or native gene comprising the chimeric gene (with a heritable phenotype of a seed phytic acid content of less than 17 micromol/g, aseed content of raffinose plus greater than 200 micromol/g, provided that the plant is not LR33), seeds from the plant, making a soybean plant with the heritable phenotype (comprising crossing LR33 or the plant comprising the chimeric gene with an elite soybean plant and selecting a progeny plant of the cross of CC crossing step that has a heritable phenotype as mentioned above), seeds of soybean plant made by the above method, a soy protein product derived from seeds of a soybean plant (homozygous for one or more gene encoding a complement of soybean product derived from seeds of a soybean plant with heritable phenotype as mentioned above. The nucleic acid is useful for altering raffinose saccharide, sucrose, phytic acid and inorganic phosphate content of soybean seeds thus leading to valuable and useful content of soybean products, since the gresence of high concentration of raffinose oligosaccharides in soy plants (and other legumes) can lead to flatulence when consumed by humans. The presence encodes a mutant myo-inosphate synthase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel isolated nucleic acid fragment encoding soybean myo-inositol 1-phosphate synthase, useful for altering raffinose saccharide, sucrose phytic acid and inorganic phosphate content of soybean seeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid fragment encoding a soybean myo-inositol 1-phosphate synthase, or a mutant myo-inositol 1-phosphate synthase having decreasing capacity for the synthesis for myo-inositol-1-phosphate. Also included are a chimeric gene (comprising the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 8; SEQ ID NO 11; 34pp; English
